#### 3. Reasons for difference and revision to full-year earnings

## (1) Difference between forecast and actual earnings for the first half

Net sales exceeded forecasts by 14,503 million yen. This was due to price increases to reflect rises in raw material prices as well as firm trends in sales volume. Each profit category also exceeded forecasts, with operating profit and ordinary profit exceeding forecasts by 913 million yen and 1,331 million yen, respectively. Although costs increased due to the impact of rising raw material costs, profits were higher on sales growth in the oils and fats business, among other factors. Profit attributable to owners of parent also exceeded forecasts by 1,515 million yen due to extraordinary profit from refunded taxes in Brazil recorded during the first three months of the fiscal year.

#### (2) Revision to full-year earnings forecast

Due to rising sales prices reflecting increases in palm oil and other major raw materials, net sales are projected to exceed previously announced earnings forecasts by 30,000 million yen. As such, the company has decided to revise its full-year earnings forecast for net sales. Furthermore, in light of current pricing for major raw materials and other factors, no change is being made to previously announced earnings forecasts for each profit category.
