AISaaS helps to create your home nursing plans!
"Easily and automatically create home nursing plans using AI" released!

Kanamic Network Co., Ltd. (Head office: Shibuya-ku, Tokyo; CEO: Takuma Yamamoto; hereinafter referred to as "the Company") is releasing an AI-powered automatic home nursing plan creation function as a service for home nursing care providers as part of the digital transformation (DX) of home care and home nursing care providers.

■Background for release

In home nursing care, creating plans based on doctor's orders, assessments, and the contents of service staff meetings requires a lot of time and specialized knowledge. However, due to staff shortages and increasingly complex work shifts, the burden of document preparation on nurses has become a major factor in putting pressure on their work.

In order to simultaneously improve on-site productivity, reduce workload, and improve care quality, we will provide an AI-based automatic creation function for home nursing plans on the Kanamic Cloud Service.

By using this "AI Home Nursing Plan Auto Creation Function," you can significantly reduce the time it takes to create home nursing plans, contributing to improved productivity in home nursing. Furthermore, by combining it with other AI services such as the already released "AI Home Nursing Report Auto Creation Function," "AI Home Nursing Summary Auto Creation Function," and "AI Home Nursing Information Document Auto Creation Function," you can further increase your business's sales and streamline staff operations.

Through this function, we will contribute to improving the management efficiency of home nursing care facilities, creating an environment where staff can work comfortably, and improving the quality of services provided to users.

■Function overview and features

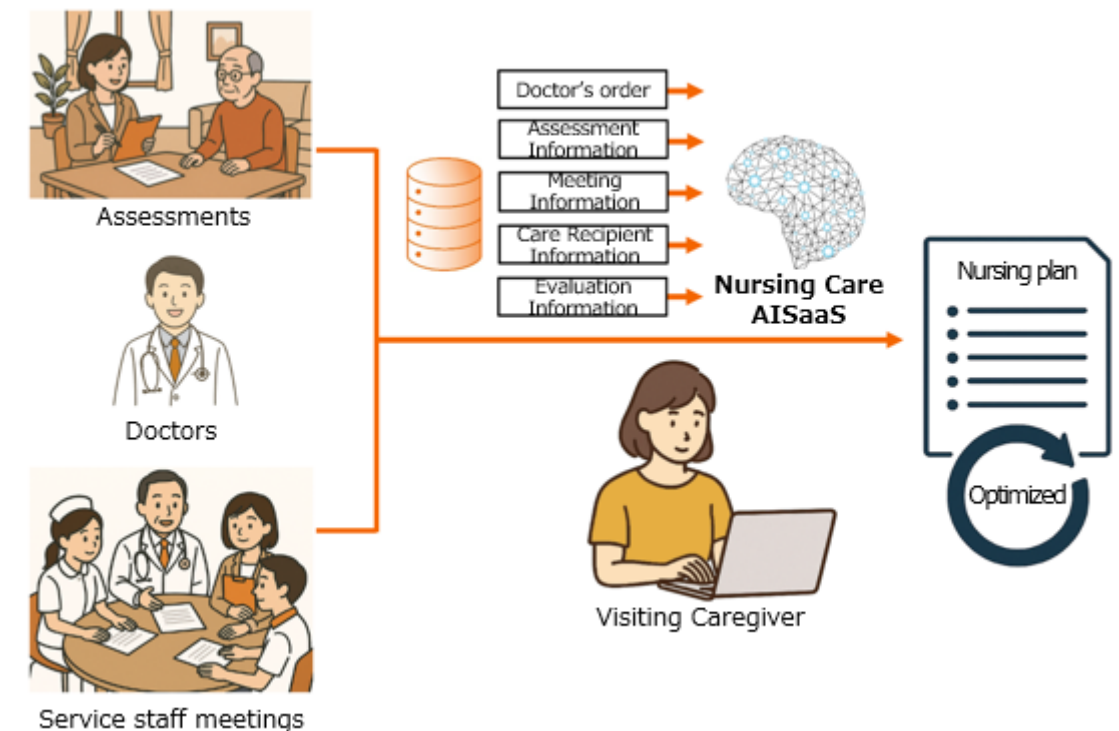

AI agent automatically generates a draft of the visit plan

A draft of the visiting nursing plan (goals, assistance content, frequency, duration, etc.) is created based on assessment information, past nursing records and reports, and key points from service staff meetings. Nurses can focus on checking, adding, and adjustments.

■Expected effects

- Significant reduction in administrative time required for creating plans
- Leveling of staff skills
- Time can be allocated to improving service quality by focusing on service content and number of visits

■Service launch date
September 25, 2025

■Kanamic Cloud Service AI Function

Starting October 1, 2025, the AI functions provided by Kanamic Cloud Services will be subject to a fee. We will continue to strive to improve functions and services to contribute to improving operational efficiency and the quality of care.

※In the future, the billing system may change due to the expansion of AI functions.

■About “Kanamic Cloud Service”

This is a regional collaboration cloud service that enables multi-professional collaboration between local governments, medical associations, and nursing care service providers, in order to contribute to the realization of a "community-based comprehensive care system" that is required in a super-aging society. We offer a lineup of information sharing systems aimed at collaboration between multi-professional organizations and other corporations, as well as business systems for nursing care providers.
