# Financial Results for FY2025 1Q

## **Net sales are recovering steadily**

Net sales were 190 million yen (up 14.0% YoY).

## **Operating income maintained its trend of quarterly improvement**

Operating income improved to -32 million yen from -77 million yen in the same period last year.

The operating income margin was -17.3% (up 29.0 pt YoY) due to a decrease in the SG&A expenses to net sales ratio resulting from the optimization of personnel expenses.

## **Progress in new customer acquisition due to the strategic shift in fraud detection services\***

New customer acquisition progressed as a result of shifting the fraud detection service strategy from a product-based to a market-domain-based marketing and sales strategy starting this fiscal year.

Recurring revenue from fraud detection services was 151 million yen (up 25.7% YoY), while the recurring revenue ratio in net sales was 79.4%.

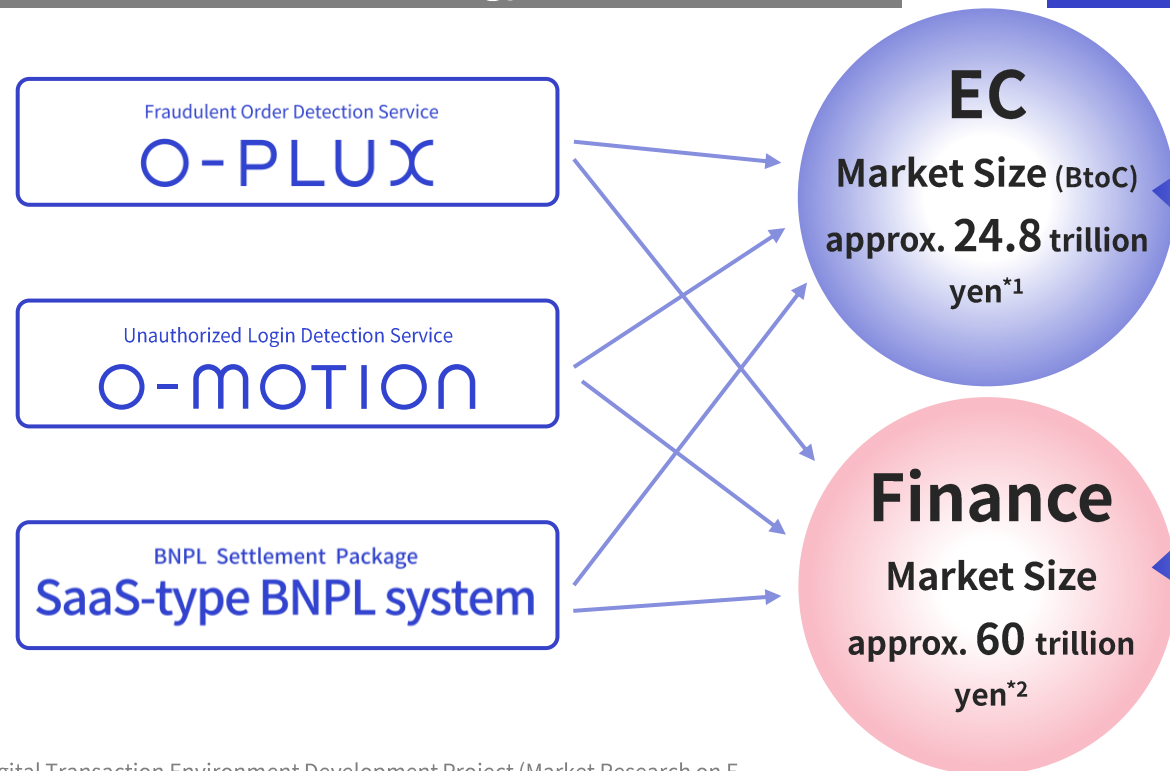

\* Fraud detection services: Fraud detection service O-PLUX and unauthorized login detection service O-MOTION

# Financial Results Highlights for FY2025 1Q / On the Strategic Shift in Fraud Detection Services

In response to the trend of strengthening fraud prevention regulations, we will accelerate the speed of customer acquisition by switching from a product-based marketing and sales strategy to a market domain-based strategy that provides end-to-end product solutions on a market domain basis.

## Traditional Strategy

Developed a market per product with a product-based strategy

## Current Strategy

Develop markets with a domain-based strategy

Approach each market domain with an end-to-end product solution strategy

YoY **+0.02 pt**

\* Monthly fee charged as a fixed amount + Screening fee charged on a pay-per-use basis based on the screening volume

The FY25 1Q sales were 190 million yen (up 14.0% YoY), operating income was -32 million yen, and ordinary income was -32 million yen.

(Unit: million yen)

	FY2022 1Q	FY2023 1Q	FY2024 1Q	FY2025 1Q	YoY change	FY2025 Forecast	Plan progress
<b>Net sales</b>	245	263	166	<b>190</b>	+14.0%	781	24.3%
(Net sales of fraud detection services)	206	222	128	<b>159</b>	+24.2%	664	24.0%
<b>Operating income</b>	48	29	-77	<b>-32</b>	-	-222	-
(Operating income margin)	19.8%	11.4%	-46.3%	<b>-17.3%</b>	+29.0 pt	-28.5%	-
<b>Ordinary income</b>	49	29	-77	<b>-32</b>	-	-225	-
(Ordinary income margin)	20.1%	11.3%	-46.4%	<b>-17.0%</b>	+29.4 pt	-28.8%	-
<b>Net income</b>	33	19	-77	<b>-32</b>	-	-225	-

The FY25 1Q sales were 190 million yen (up 14.0% YoY), with progress of 24.3% according to the plan.  
Sales of fraud detection service O-PLUX remained strong.

Net Sales Trends

(Unit: million yen)

\* Others: other sales including sales of SaaS-type BNPL systems.

The FY25 1Q sales composition of fraud detection services, which are our main services, was 84.0% (up 11.2 pt YoY).

Sales Composition Trends by Service

\* Others: other sales including sales of SaaS-type BNPL systems.

The FY25 1Q gross profit was 130 million yen (up 27.9% YoY), and the gross profit margin was 68.5% (up 7.5 pt YoY).

The FY25 1Q operating income was -32 million yen, and the operating income margin was -17.3% (up 29.0 pt YoY).  
The deficit continues to narrow each quarter.

The FY24 1Q EBITDA was -23 million yen, and the EBITDA margin was -12.5% (up 33.8 pt YoY).

FY25 1Q recurring revenue from fraud detection services was 151 million yen (up 25.7% YoY), and the recurring revenue ratio in net sales reached 79.4% (up 7.4 pt YoY).  
- Sales of the fraud detection service O-PLUX for EC increased steadily.

\* Recurring revenue = Monthly fee charged as a fixed amount for fraud detection services O-PLUX and O-MOTION + Screening fee charged on a pay-per-use basis based on the screening volume (including 不正チェックカー), excluding sales of SaaS-type BNPL systems  
© Cacco Inc.

\* Recurring revenue ratio = Recurring revenue/Net sales (total of all services)

In FY25 1Q, the screening volume for fraud detection service O-PLUX at the time of credit card payment continued to increase by 37.3% YoY.

Trends in O-PLUX Screening Volume at the Time of Credit Card Payment

(Unit for cases: one thousand cases)

\* Number of screenings performed by O-PLUX Payment Protection at the time of payment.

In FY25 1Q, the average monthly churn rate for fraud detection services remained low at 0.57% (up 0.02 pt YoY).

Gross Churn Rate

\* Gross churn rate = Annual average of MRR from the clients who churned in the current month / MRR at the beginning of the current month

Net Churn Rate

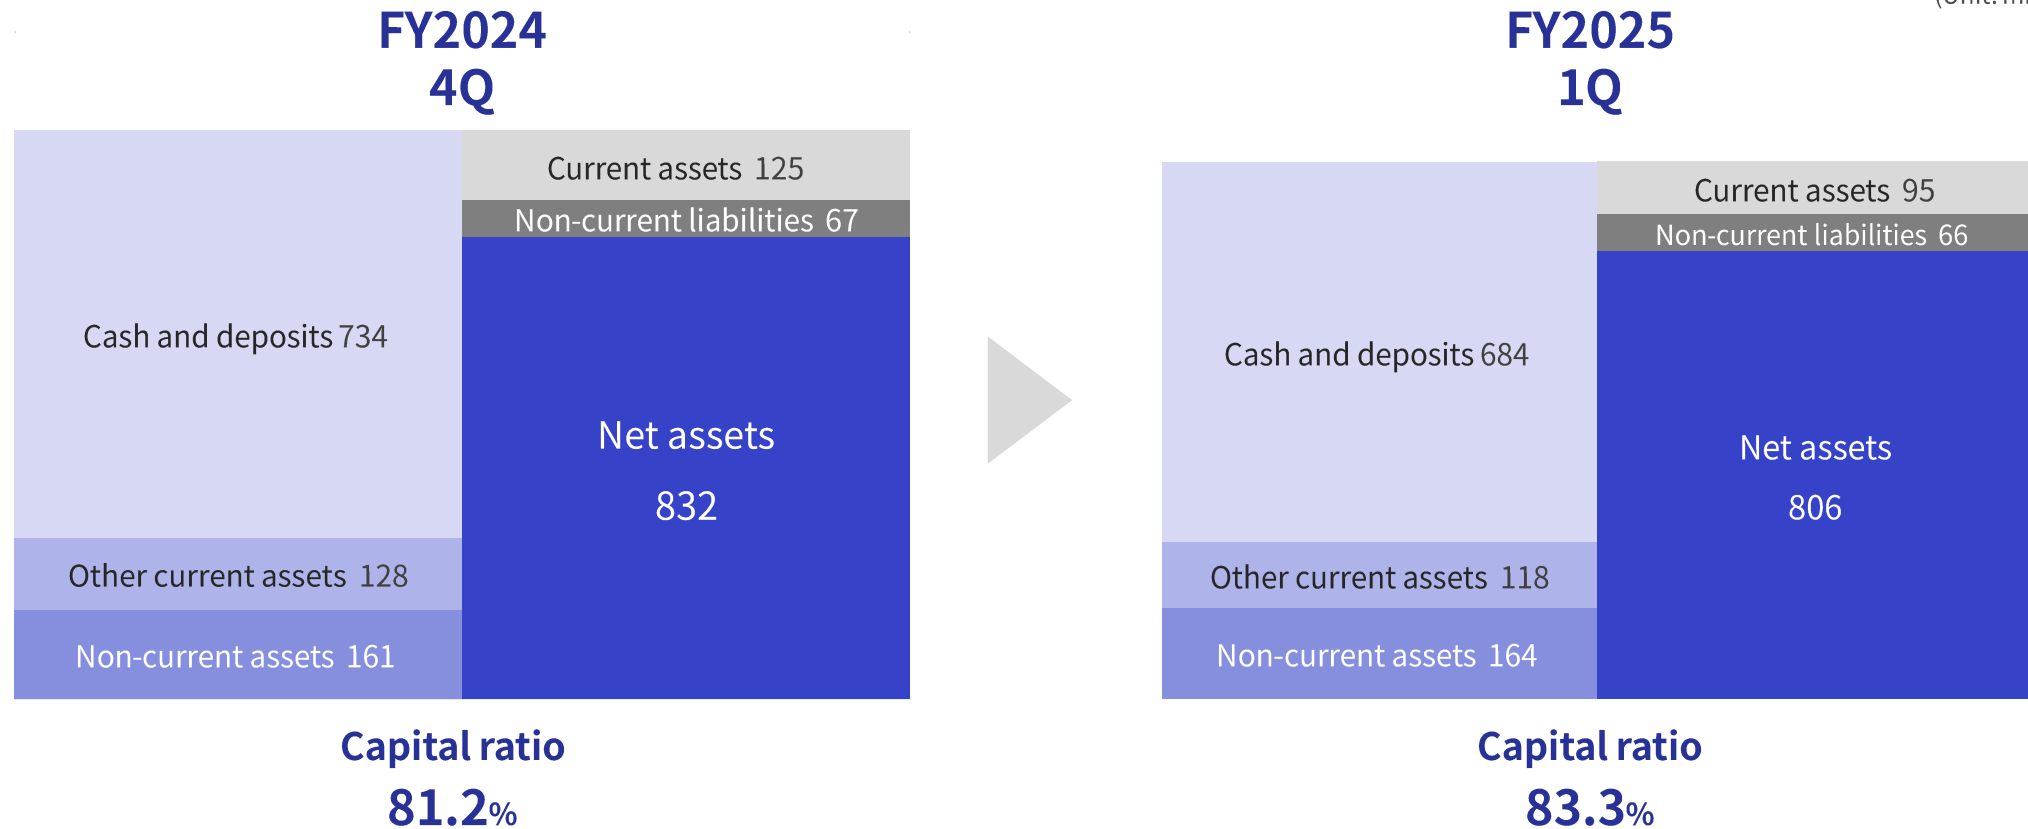

\* Net churn rate = (annual average of MRR from the clients who churned in the current month - MRR from new contracts for current month) / MRR at the beginning of the current month (excluding SaaS-type BNPL systems)

On the asset side, current assets decreased due to a decrease in cash and deposits, while non-current assets increased due to an increase in investments and other assets.

On the liability side, current liabilities decreased due to a decrease in accounts payable - trade, and non-current liabilities decreased due to a decrease in long-term borrowings.

(Unit: million yen)

# Forecast Financial Results of FY2025

(Unit: million yen)

	FY2024 Actual	FY2025 Forecast	YoY Change
<b>Net sales</b>	734	<b>781</b>	+6.5%
(Net sales of fraud detection services)	552	<b>664</b>	+20.3%
<b>Operating income</b>	-244	<b>-222</b>	-
(Operating income margin)	-33.3%	<b>-28.5%</b>	-
<b>Ordinary income</b>	-254	<b>-225</b>	-
(Ordinary income margin)	-34.7%	<b>-28.8%</b>	-
<b>Net income</b>	-255	<b>-225</b>	-
<b>EPS (yen)</b>	-93.74	<b>-82.94</b>	-

## Net sales +6.5% YoY

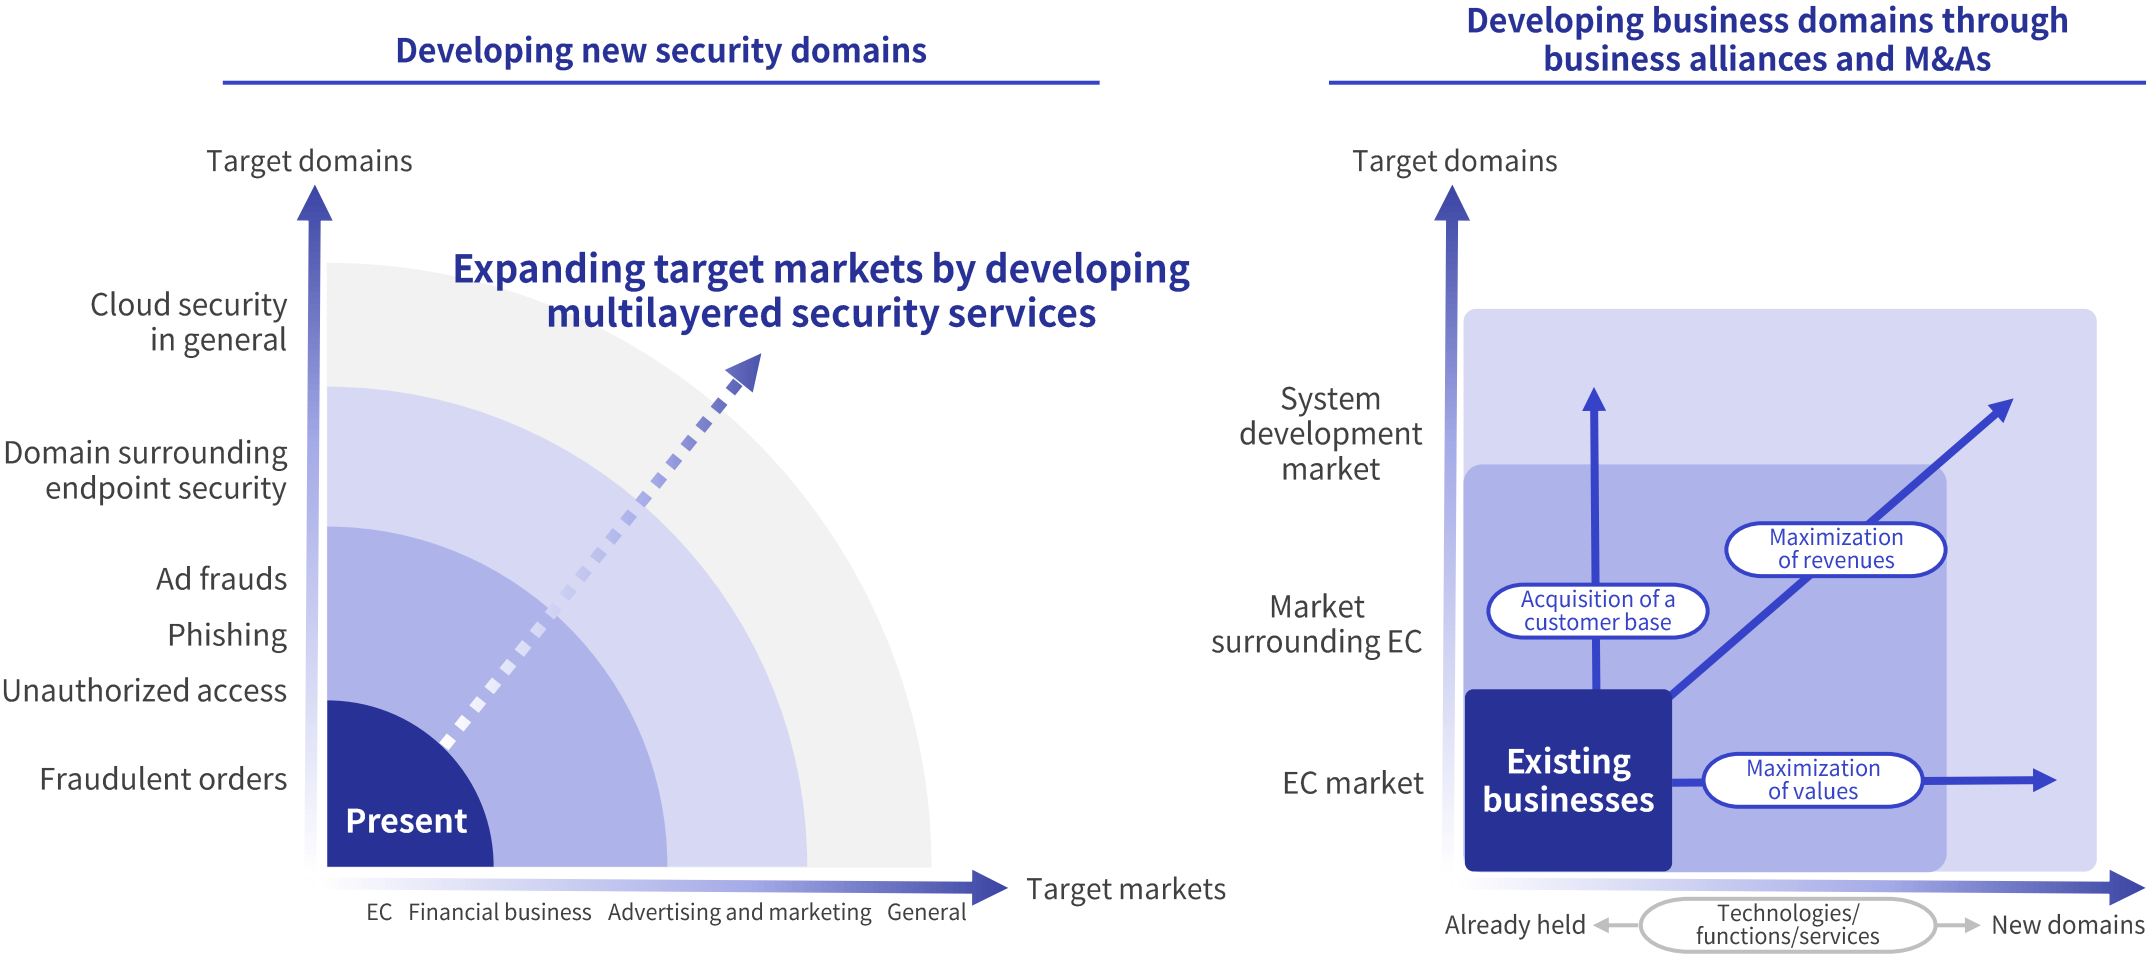

Although we expect sales of O-PLUX, our core fraudulent order detection service, to increase by approximately 111 million yen (up 20.3% YoY), we expect sales for the fiscal year ending December 2025 to be 781 million yen (up 6.5% YoY) due to the impact of a decline in sales of our payment consulting service.

## Operating income -222 million yen

Operating income is expected to be -222 million yen due to a shift to a market-domain-based marketing and sales strategy for new customer acquisition and revenue growth, as well as investment in developing new functions in response to market conditions and needs.

# FY2025 Growth Strategy

We will venture into new security fields and expand our target markets based on our fraud detection service, which is our current leading service. Furthermore, we aim to build up our unique business domains by extending our business areas through business alliances and M&As.

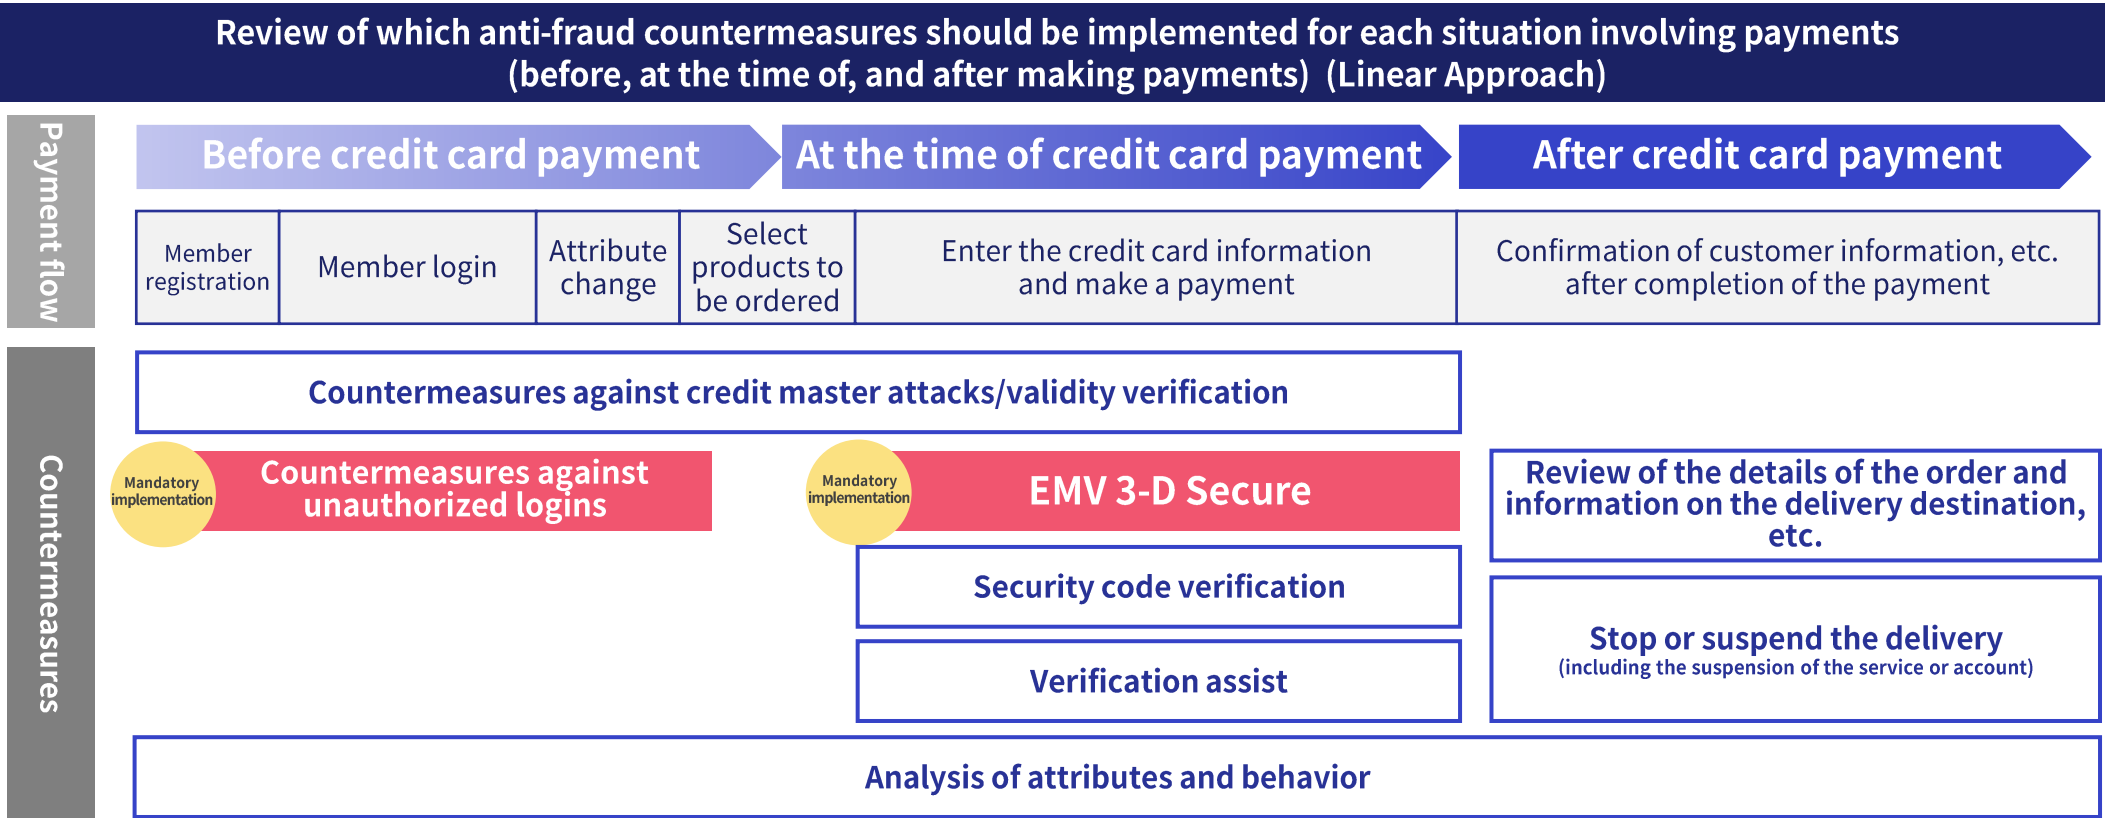

## Provide trusted services as Japan's leading cybersecurity company in the fraud detection service domain.

- 1 Maximally leverage the trend of strengthened fraud prevention regulations and drive **further customer expansion by providing seamless fraud countermeasures through the fraud detection service O-PLUX.**
- 2 **Shift** from a product-based strategy **to a market-domain-based marketing and sales strategy** to accelerate customer acquisition.
- 3 Drive the development of new features for the unauthorized login detection service O-MOTION and **expand revenue by acquiring customers in the financial and EC domains.**
- 4 **Promote the building of new business domains through business alliances and M&As** to drive revenue growth.

# (1) Leverage the Trend of Strengthened Fraud Prevention Regulations - 1

[The Credit Card Security Guidelines Version 6.0](#)<sup>\*1</sup> issued in March 2025 not only mandate that EC merchants implement EMV 3-D Secure<sup>\*2</sup> but also newly mandate the implementation of measures against unauthorized logins. The guidelines emphasize that for EC merchants, it is crucial to perceive the flow of credit card transactions as a “line” and to implement appropriate fraud countermeasures at each point along that line. This creates a favorable market environment for Cacco’s fraud detection services, which can provide consistent countermeasures based on this “Linear Approach.”

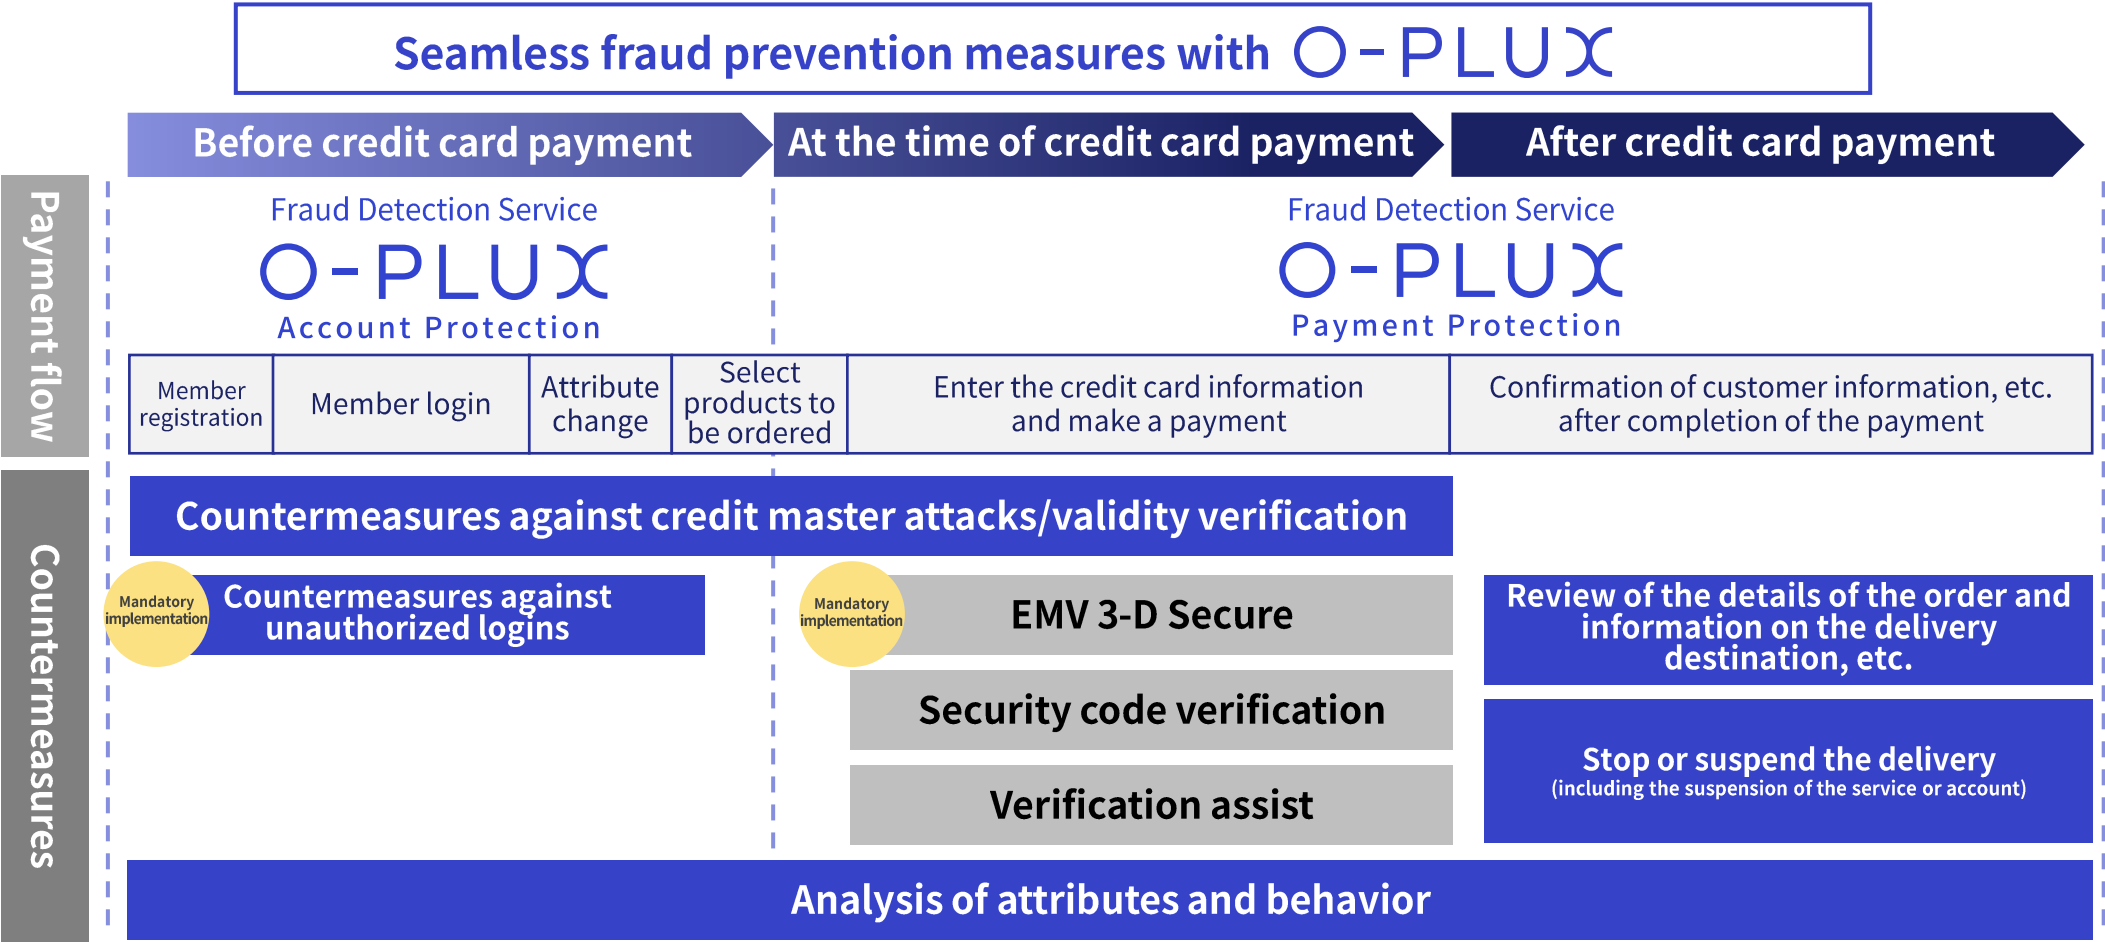

<sup>\*1</sup> Issued by the Credit Card Transaction Security Countermeasures Council. (Secretariat: Japan Consumer Credit Association)

<sup>\*2</sup> Identity authentication services recommended by international credit card brands to ensure that credit card payments on the Internet are made more securely. Those services are collectively referred to as “EMV 3-D Secure,” although each brand uses a different name for those services.

# (1) Leverage the Trend of Strengthened Fraud Prevention Regulations - 2

We will demonstrate to the market that seamless fraud countermeasures are achievable with O-PLUX, rather than relying on traditional, standalone security measures. Additionally, we aim to acquire new customers and to increase revenue by enhancing functionality to meet the needs of businesses that have yet to adopt our products as well as potential customers.

= Supported by O-PLUX

## (2) Shift to a Market-domain-based Marketing and Sales Strategy to Accelerate Customer Acquisition

In response to the trend of strengthening fraud prevention regulations, we will accelerate the speed of customer acquisition by switching from a product-based marketing and sales strategy to a market domain-based strategy that provides end-to-end product solutions on a market domain basis.

### Traditional Strategy

Developed a market per product with a product-based strategy

### Current Strategy

Develop markets with a domain-based strategy

Approach each market domain with an end-to-end product solution strategy

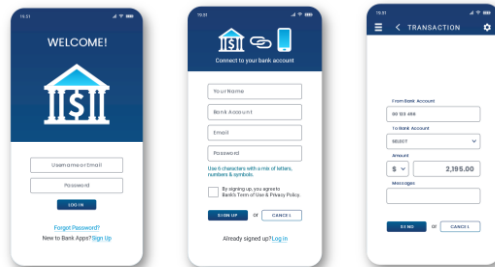

\*1: "FY2023 Digital Transaction Environment Development Project (Market Research on E-Commerce)" – Ministry of Economy, Trade and Industry

\*2: "Industry Trends Research: Industry-Specific Market Size Rankings" – DigitalWorks Inc.

Companies that are considering the introduction of O-MOTION are increasingly seeking features such as “mobile app compatibility,” “tools to streamline development prior to implementation,” and “enhanced authentication functions.” To meet these demands, we will drive the development of new functions, which will enable us to expand into the EC and finance domains, where adoption has thus far been limited, and accelerate new customer acquisition to drive revenue growth.

## New Feature Development

### Mobile app compatibility

\* Scheduled for release in July 2025

### Enhanced authentication functions

### Streamlining of development prior to implementation

## Acceleration of New Customer Acquisition

We do not limit ourselves to existing business domains, but proactively utilize business alliances and M&A to acquire new business domains and markets, aiming for phase-based growth.

We will proactively utilize business alliances and M&A to build new business domains, aiming to generate synergies among businesses and customers, promote phase-based growth through increasing new profit points, and increase company-wide profits. In addition, we will utilize profits so obtained to make investments to further acquire new business domains and drive our cycle of building new business domains.

# Appendix

## Cocco Evolutionary Purpose

# Shaping the “Let’s Do It” for a next game changer

The Cocco Evolutionary Purpose embodies our desire to contribute to the development of the Japanese economy by supporting people and companies that are taking on the challenge of making the world a better place.

When the company was founded, there was little fraud in Internet transactions, and there were no fully functional fraud detection services in the world. But we believed that in the near future, there would be a wide variety and high volume of fraudulent activities in all Internet transactions, including e-commerce.

Almost a decade later, as we predicted, fraudulent activity is occurring in all kinds of Internet transactions, and the methods are becoming more complex, evolving and expanding. Since the release of O-PLUX in 2012, we have continued to develop it so that it can adequately respond to evolving threats, and as a result, it is currently the No. 1\* installed security solution in Japan.

As a company that creates new value through security, payment, and data science technologies, Cocco will continue to strive to realize the Cocco Evolutionary Purpose and sustainably increase its corporate value.

\* TOKYO SHOKO RESEARCH, LTD., “Survey on the number of EC sites in Japan introducing paid fraud detection service,” (as of the end of March 2024)

## Security

### Fraud Detection Service

Fraud Detection Service

**O-PLUX**  
Payment Protection

Detect fraudulent orders such as payments in arrears in EC payments and resale in real time. No. 1\*1 in Japan in terms of number of installations.

Fraud Detection Service

Unauthorized Login Detection Service

**O-PLUX** **O-MOTION**  
Account Protection

Detect in real time unauthorized access and unauthorized logins at EC, financial institutions, and member sites, etc.

Anti-Phishing Service  
**Impenetrable  
Defense PACK**  
for Phishing

One-stop anti-phishing solution that detects phishing e-mails and phishing domains used to fraudulently obtain information, preventing spoofing logins using such fraudulently obtained personal information.

Recurring revenue type

## Payment

### Payment Consulting Service

Non-recurring revenue type

Provide payment systems and offer consulting services for the BNPL\*2 business to payment service providers and to business operators, considering the possible introduction of BNPL settlement. Use **O-PLUX** as the screening engine.

### BNPL Packaged Service

BNPL Settlement Package

**SaaS-type BNPL system**

Release the “SaaS-type BNPL system,” a BNPL settlement package that can be installed without initial investment.

This is provided not only to payment service providers, but also to EC shopping carts and major EC business operators, etc.

Recurring revenue type

## Data Science

### Data Science Service

Non-recurring revenue type

Develop and provide data analysis and algorithms using AI, statistics, and mathematical optimization techniques.

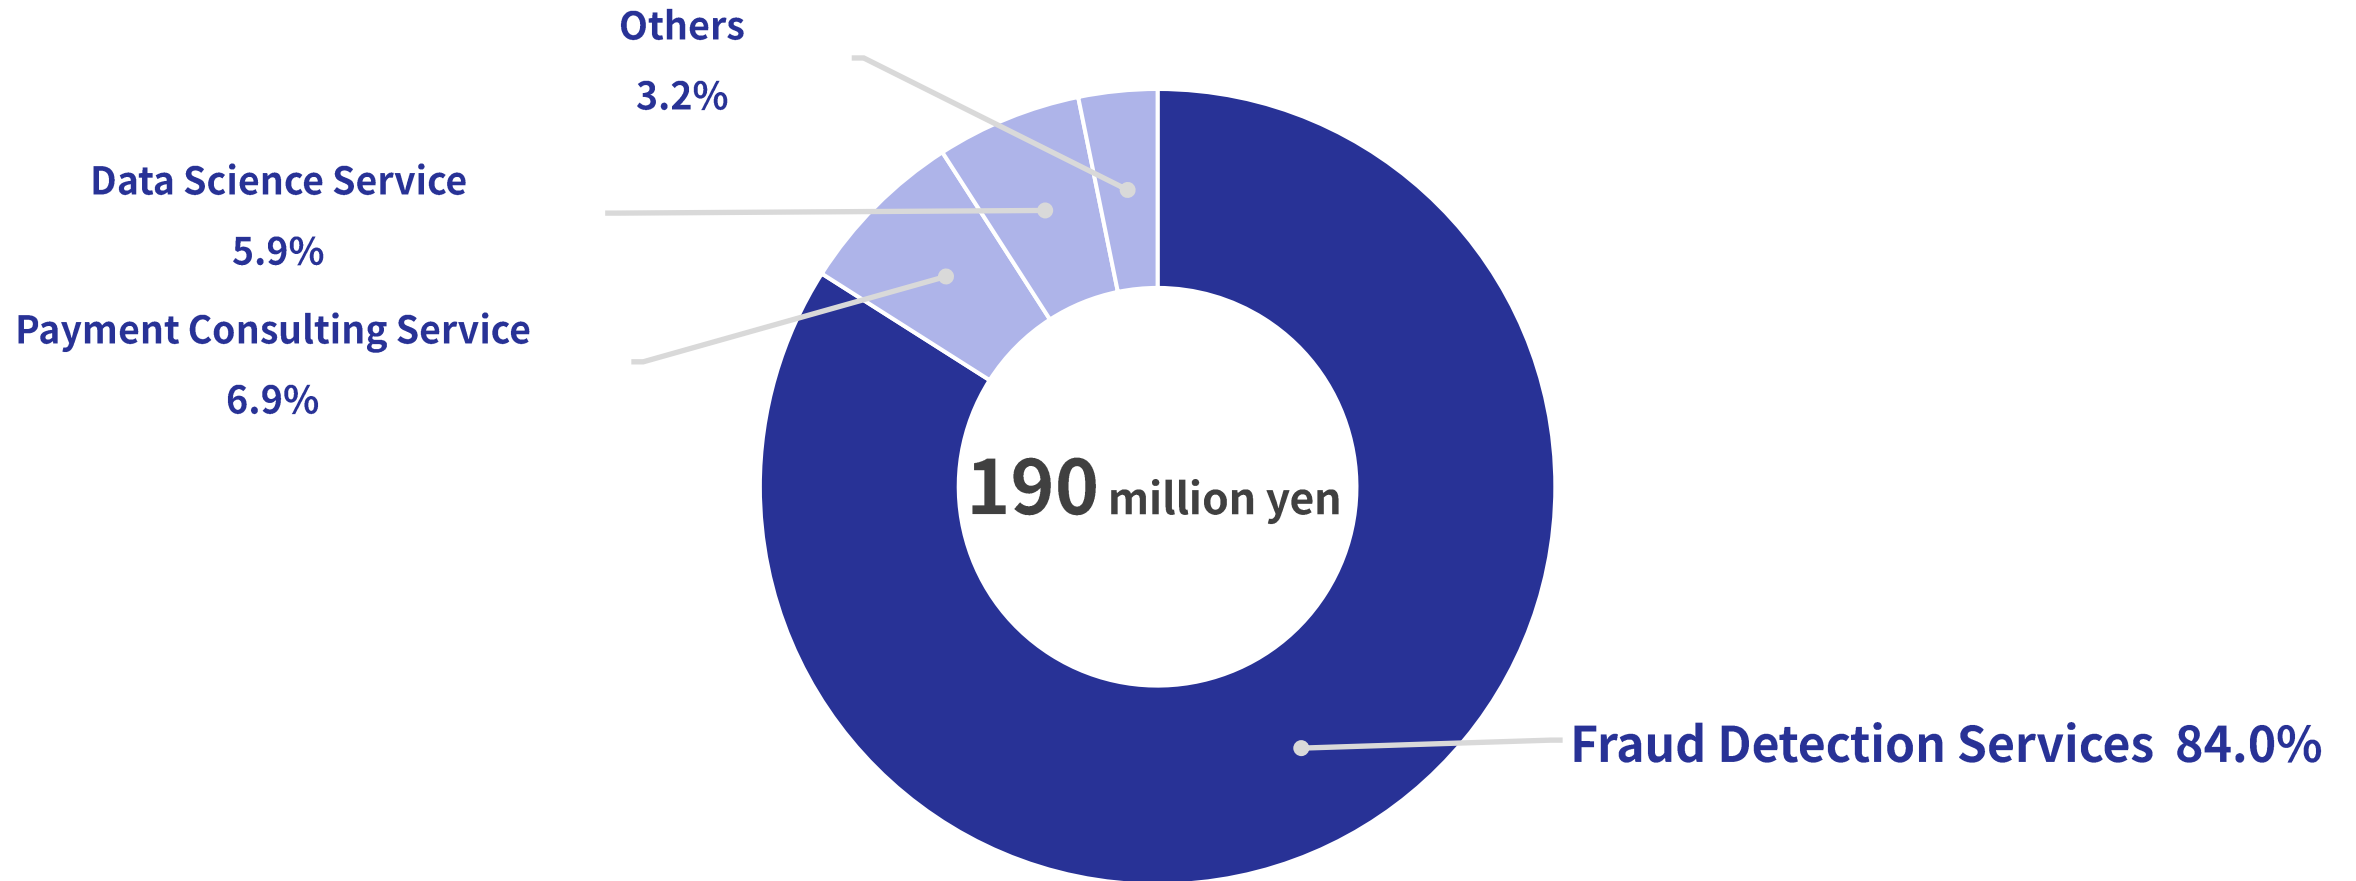

Provide data science services for various sectors, including optimized production planning for manufacturers, demand forecasting for retailers, and preparation of optimized shift rosters for call centers.

Recurring revenue type

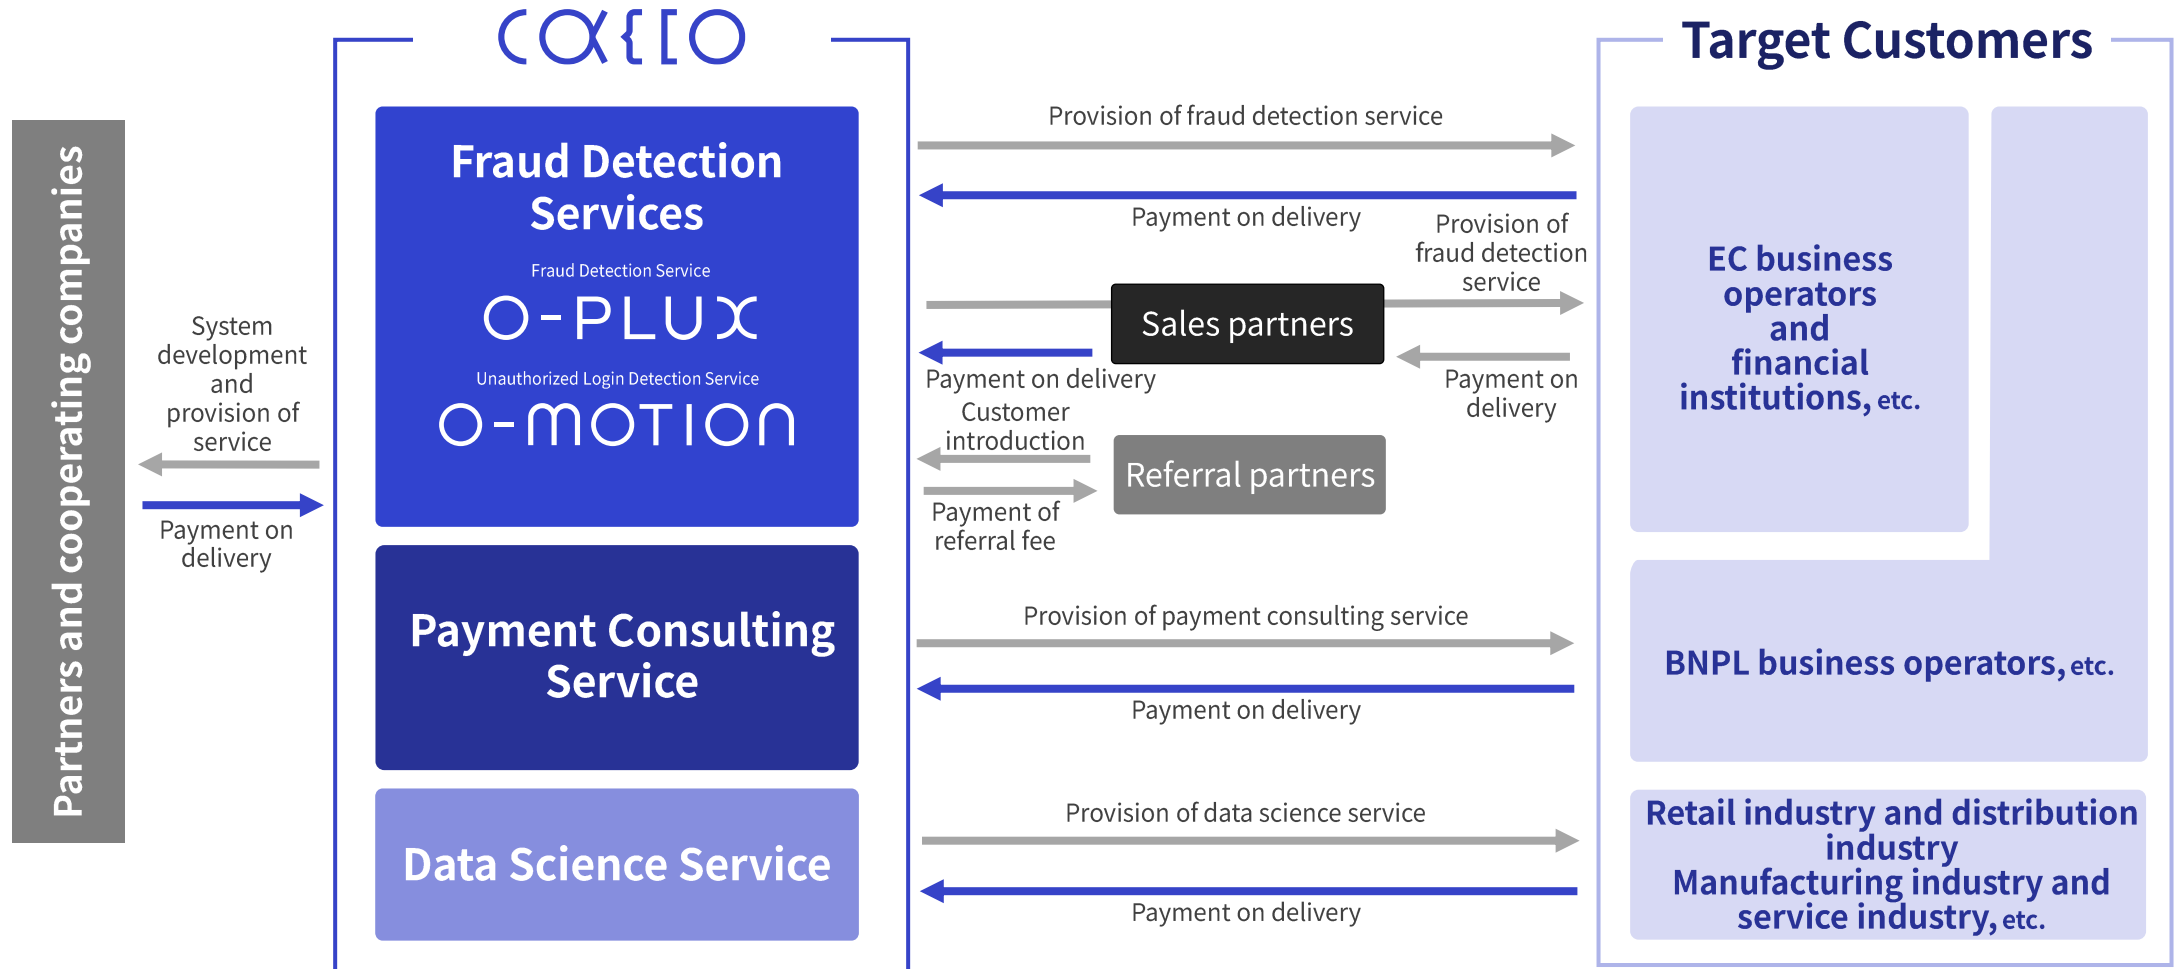

\*1 TOKYO SHOKO RESEARCH, LTD., “Survey on the number of EC sites in Japan introducing paid fraud detection service,” (as of the end of March 2024)

\*2 BNPL: Abbreviation for Buy Now Pay Later, post-payment settlement

Our current growth driver is fraud detection services, which account for 80% of our sales.

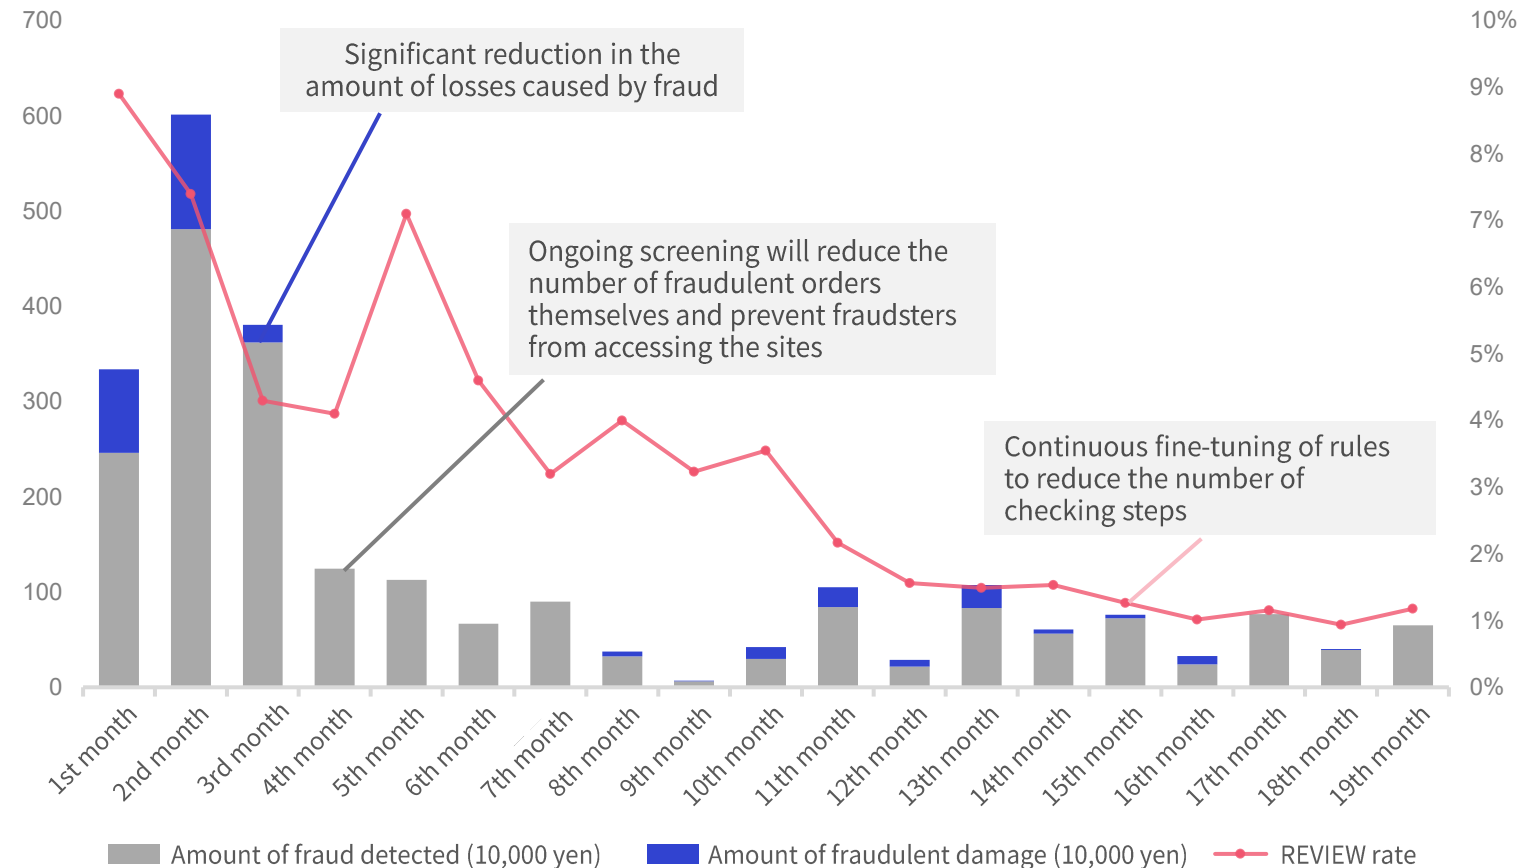

\* Others: other sales including sales of SaaS-type BNPL systems.

## General retail company <Measures against fraudulent credit card use>

O-PLUX has detected **approximately 250 million yen** in fraudulent credit card use in EC over a five-year cumulative period.

Annual distribution amount	7 billion yen per year
Challenges faced by customers	Fraudulent use of credit cards in EC (Maximum 10 million yen per month)
Achievement	Detected fraudulent uses worth 100 million yen in the first year of installation  Cumulative total of <b>approximately 250 million yen</b> was detected over a period of approximately five years.

\* The amount of fraud detected is the total amount of transactions that are confirmed as fraudulent (negative registration) before chargeback due to failed screening results, card attribute discrepancies in “REVIEW” screening results, and failed identity verification before shipment.

\* The REVIEW rate is the ratio of the number of REVIEWS to the total number of screening results. © Cacco Inc.

### Kitamura Co., Ltd. <Credit card fraud and resale prevention / Combined with 3D Secure>

Fraudulent order methods have become more sophisticated,  
and even 3D Secure combined with visual detection takes too much time and effort.  
The introduction of O-PLUX with high fraud-detection accuracy enabled the company to eliminate the problem of visual checks.

#### Problems before Installation

Even with the introduction of 3D Secure, fraudulent use of credit cards still occurred.

Although visual checks were implemented as a countermeasure, the effectiveness was limited due to the increasing sophistication of fraudulent tactics.

#### Benefits of Installation

- O-PLUX achieved a localized screening process that complemented 3D Secure.
- **No fraudulent credit card use** has been found in transactions with an OK rating.
- The company resolved the problem of visual checks, **reducing the labor-hours equivalent to two dedicated staff members.**

Case Study Interview (Full Text) with Kitamura Co., Ltd.  
[https://frauddetection.cacco.co.jp/o-plux/case\\_studies/kitamura/](https://frauddetection.cacco.co.jp/o-plux/case_studies/kitamura/)

### PIA Corporation <Countermeasures against unauthorized logins / Risk-based authentication>

#### Problems

- The company wanted to take countermeasures against spoofing logins during short periods of concentrated access.
- Since the company has a wide age range of users, it did not want to compromise convenience.

#### Benefits of Installation

- Implementing O-PLUX has enabled the company to detect mechanical access, resulting in zero spoofing logins.
- Risk-based authentication has allowed the company to take measures without compromising convenience by implementing multi-factor authentication for suspicious users only.

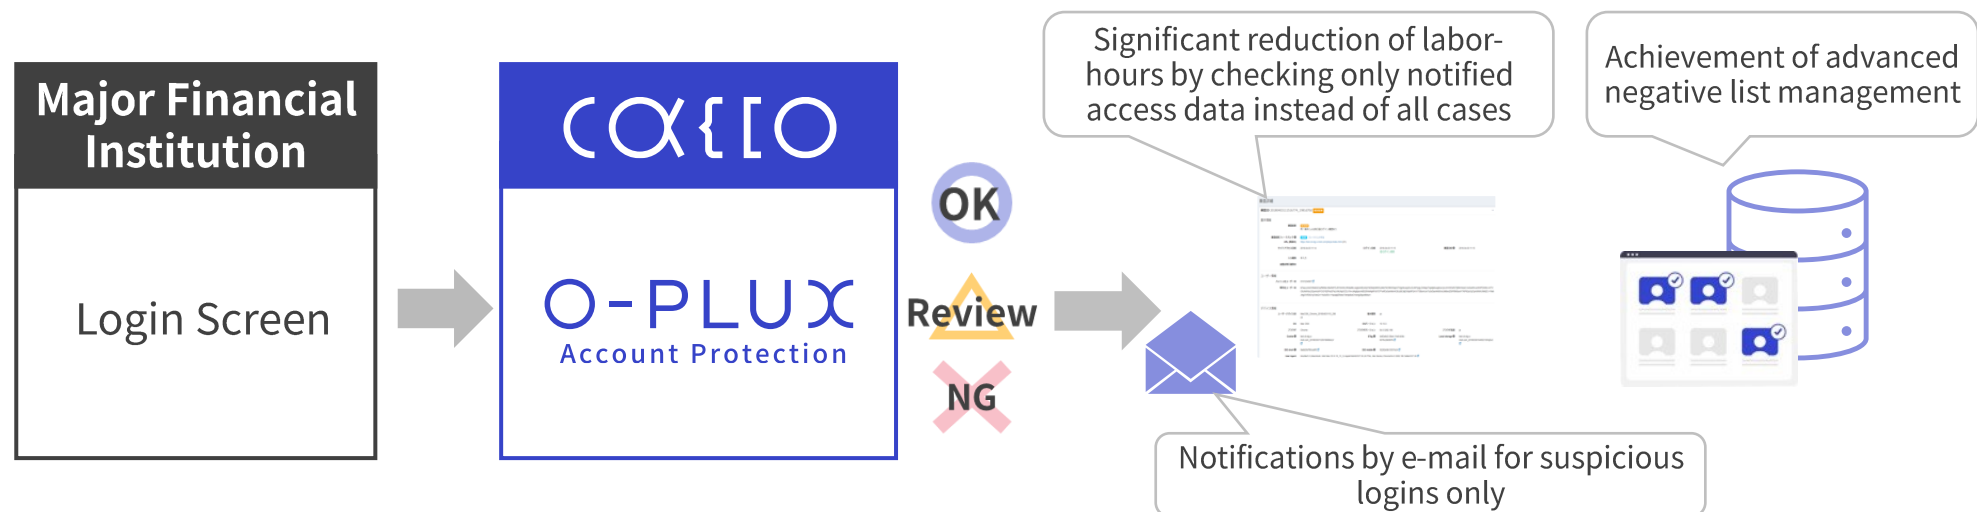

### A major financial institution <Unauthorized login monitoring>

#### Problems

- Logins were recorded but not made visible, causing large quantities of labor-hours to be incurred for login monitoring.
- The company needed to manage not just IP addresses but also a highly accurate negative list.

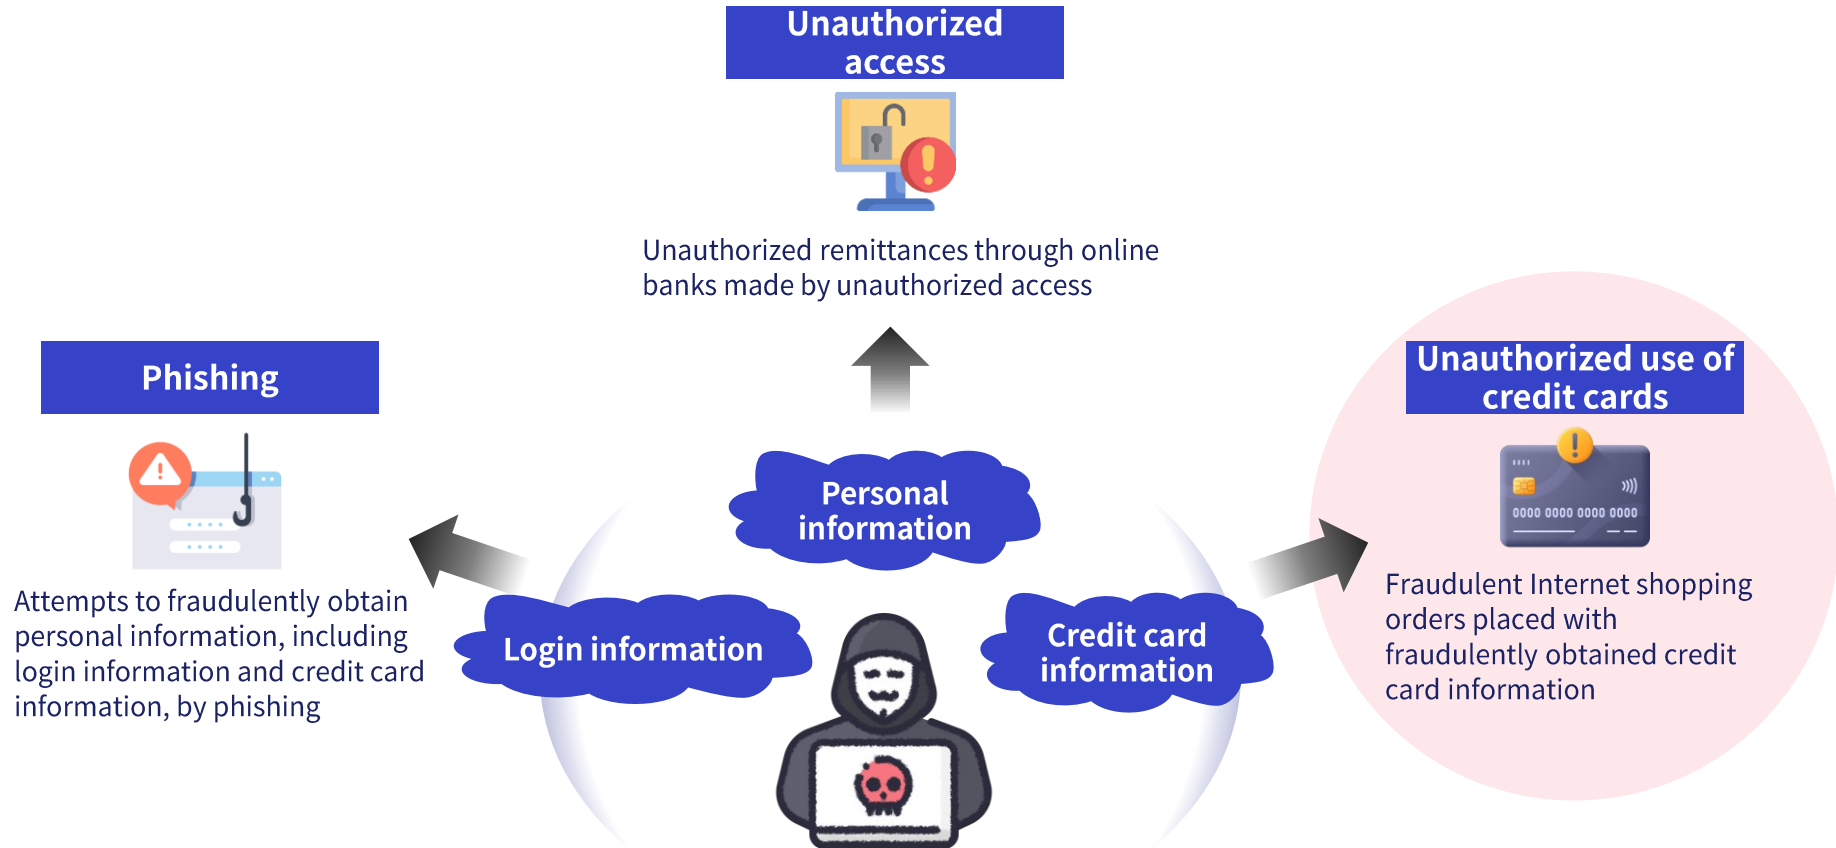

#### Benefits of Installation

- O-PLUX implementation has made access data visible for each user, significantly reducing the labor-hours required for login monitoring.
- O-PLUX's device identification technology has achieved negative list management that includes not only IP addresses but also device identification information.

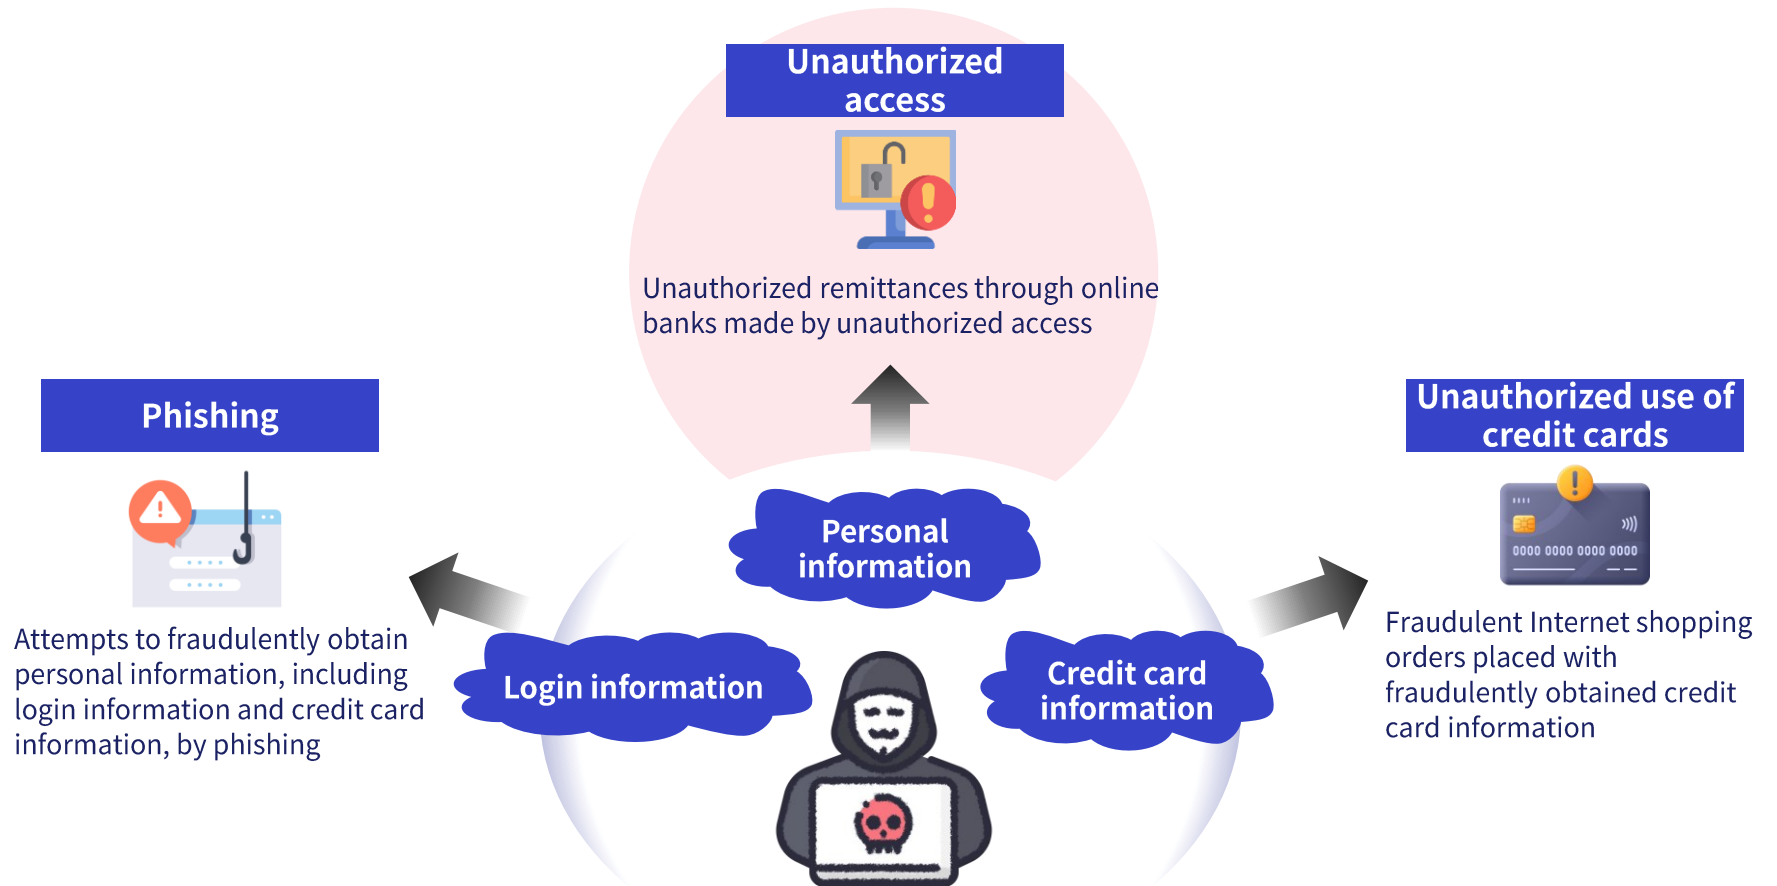

Crimes of fraudulently obtaining and misusing credit card information are rapidly increasing, and the damage from unauthorized use of credit cards (number theft) reached the record high of 51.3 billion yen\* in 2024. The needs of EC business operators to take countermeasures against fraud are rapidly expanding.

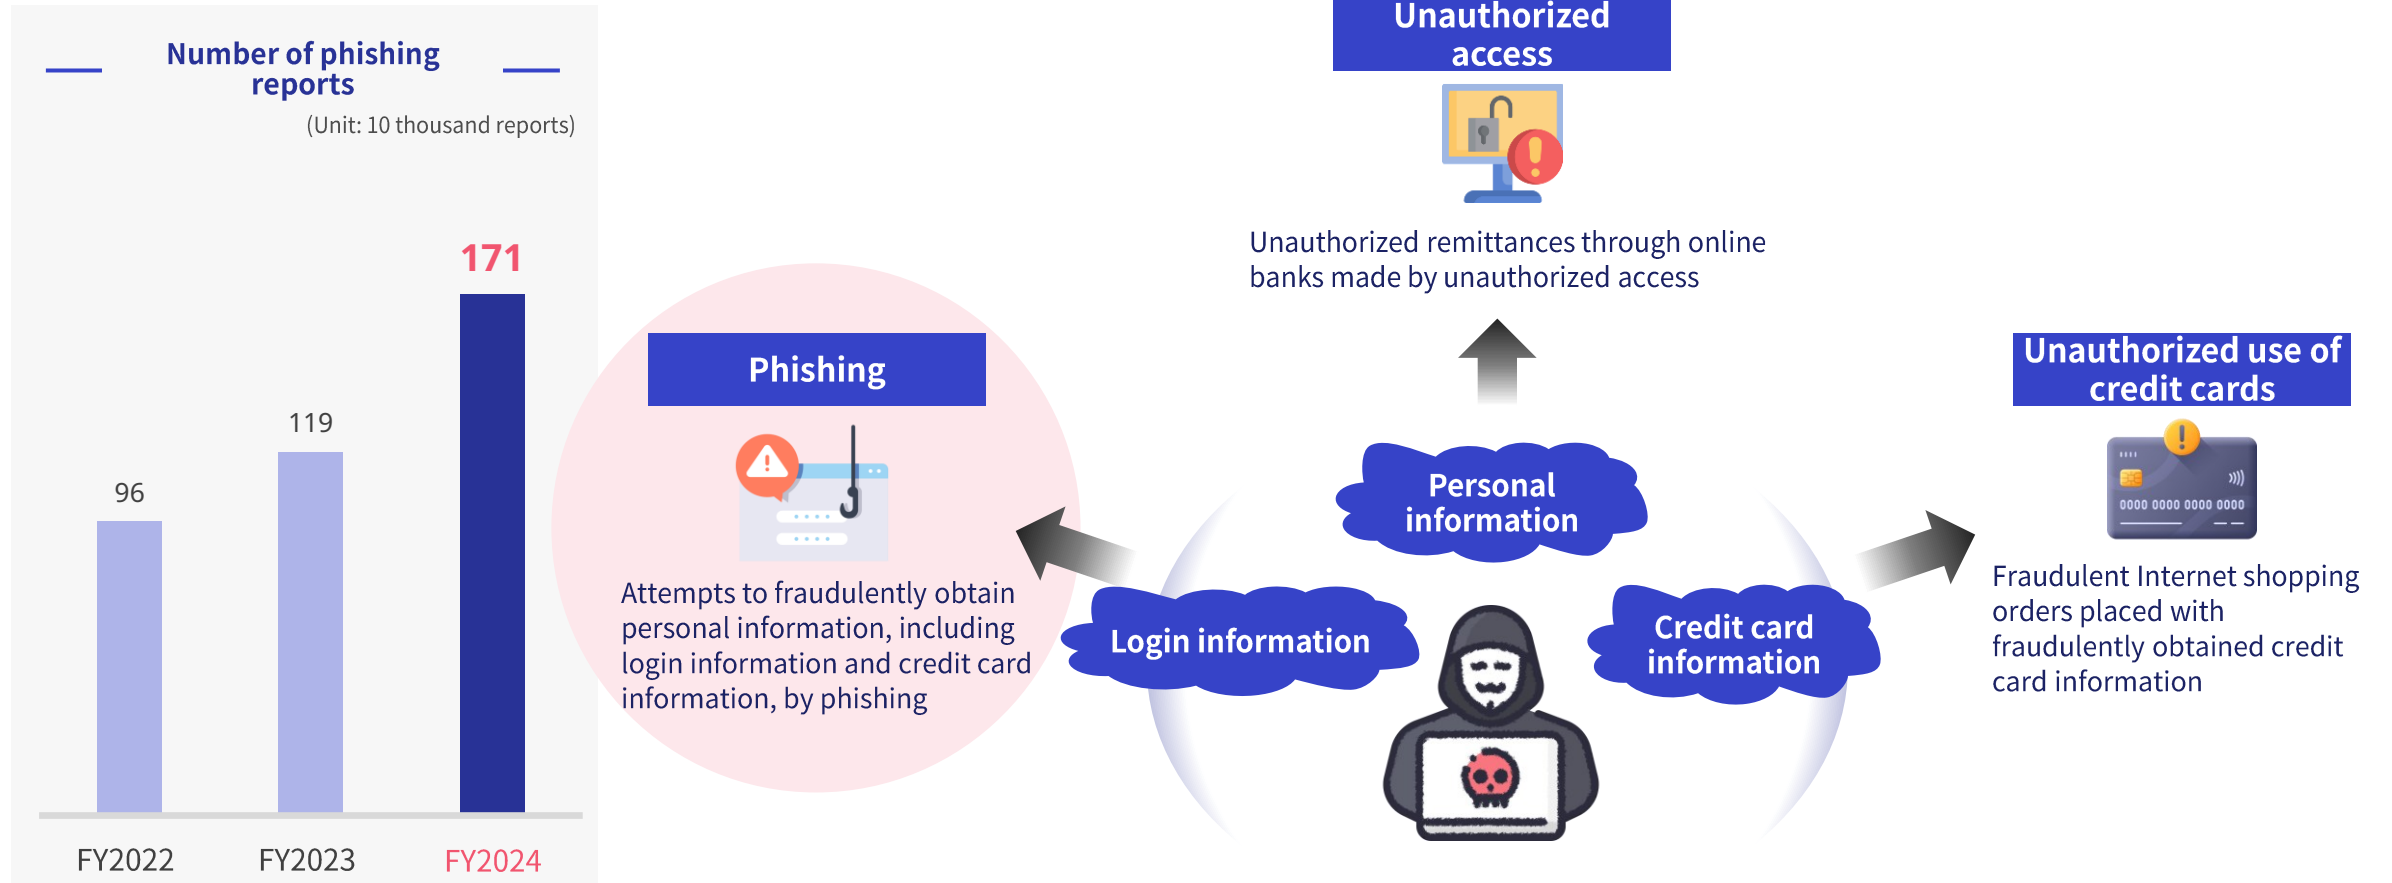

\* Japan Consumer Credit Association, "Status of Damage from Unauthorized Use of Credit Cards," March 2025

Following a sharp increase in the number of recognized incidents of malicious activities after unauthorized access in Japan since fiscal 2022, there has been a significant expansion in the societal demand for enhanced countermeasures against such threats.

Source: National Police Agency, Ministry of Internal Affairs and Communications, and Ministry of Economy, Trade and Industry, 2023  
“Status of Research and Development of Technologies for Unauthorized Access and Access Control Functions (FY2023)”

The number of phishing reports also increased from 960,000 in 2022 to 1,710,000 in 2024 (YoY +77.3%). The number of fraud crimes involving the misuse of information obtained fraudulently through phishing is skyrocketing, so the need for countermeasures is rising accordingly.

\* Source: Council of Anti-Phishing Japan, "Number of Phishing Reports"

Credit card fraud (number theft) is increasing proportionally with the growth of the EC market.

- Social demand for anti-fraud measures, such as the revision of the Installment Sales Act and publication of the “Credit Security Measures Vision 2025,” is increasing

Source: Ministry of Economy, Trade and Industry, Commerce and Information Policy Bureau, Information Economy Division, “FY2023 Report on Commissioned Industrial and Economic Research (Market Research on Electronic Commerce).” Japan Consumer Credit Association, “Status of Damage from Unauthorized Use of Credit Cards,” March 2025

Online brokerage firm  
Credit card company, etc.

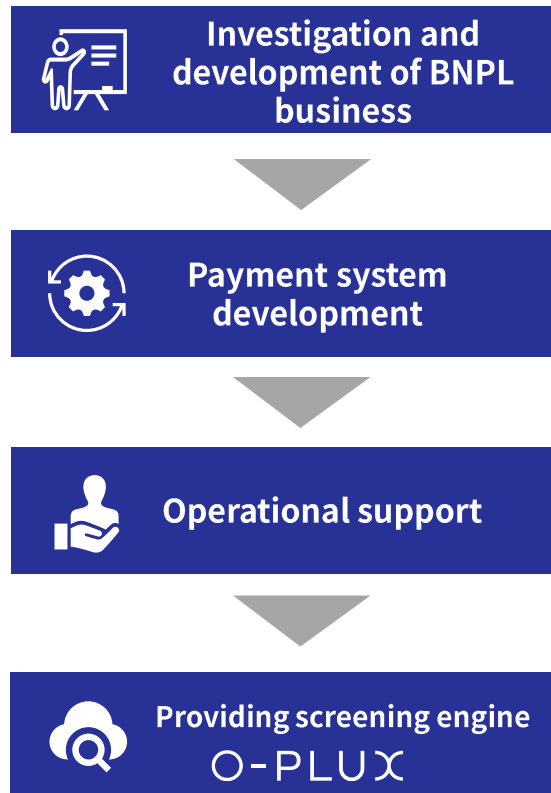

<sup>\*1</sup> Only selected companies with permission to be listed are included. As of the end of April 2025.

A packaged service focusing on countermeasures against phishing with the O-MOTION unauthorized login detection service at its core.

We provide one-stop support for the establishment and launch of BNPL, including service construction, payment system development, and operational support.

We offer the O-PLUX fraud detection service as the screening engine.

**Point 1**

## Experience in setting up and developing systems for multiple BNPL businesses

- Experience in constructing payment systems that handle several million transactions per month
- Experience in supporting the launch of BNPL businesses (business planning, preparation of various requirement definitions, etc.)
- Experience in post-launch support (credit lines, operation process development, etc.)

**Point 2**

## Support from consultants with experience in BNPL operations

Consultants with extensive experience in BNPL operations provide optimal proposals from the customer's perspective.

**Point 3**

## Fraud detection using O-PLUX, the No. 1 solution in terms of the number of installations in Japan\*

We have achieved a great deal of success in fraud detection in the financial and settlement fields, where strict accuracy is required. O-PLUX, our fraud detection service, is the No. 1 solution in terms of installation numbers in Japan.\*

\* Based on "Survey on the number of EC sites in Japan introducing paid fraud detection service" (as of the end of March 2024) performed by TOKYO SHOKO RESEARCH, LTD.

Based on the technologies of AI, statistics, and mathematical optimization, we develop and provide algorithms that contribute to the core of corporate activities, such as modeling predictions and automation by applying machine learning.

## Our approach

### SAKIGAKE KPI

Our service includes data aggregation and visualization, factor analysis, KPI calculation, analysis reporting, and subsequent proposals. A data analysis service that provides up to 100 million records in 30 business days at a cost of 2 million yen.

### Data Science Branch Office

Data science resources that can be utilized on a monthly contract basis as if it were a company division. It realizes the concept of a “data science branch office” to meet all kinds of analysis needs at various stages.

### Algorithm development

Development of algorithms that seek to increase profits by processing business operations, including optimization beyond the employees’ own experience, productivity improvement through automated processing, and forecasting of demand and risk.

## Case studies

### Optimization

**Wall material manufacturer with annual sales of 119 billion yen**

Created production plans for 1,700 products and 12 production lanes. Made a production order plan to maximize production volume and minimize losses while observing complex conditions.

**Annual cost reductions of up to 130 million yen**

### Statistics/AI

**Stationery manufacturer with annual sales of 5.5 billion yen**

Developed algorithms for demand forecasting and production instructions that can maximize profits on calendars, organizers, and stationery. Minimized opportunity losses due to shortages.

**70% reduction in sales opportunity losses**

### Optimization

**Call center**

Established automatic prediction of demand on a daily and hourly basis for the following month and generated a staffing plan to satisfy multiple constraints such as management indicators, employee work preferences, and working conditions.

**Annual cost reductions of 60 million yen**

This document may contain projections based on assumptions, forecasts and plans related to the future as of the announcement date. These forward-looking statements are based on information currently available to us and certain assumptions that we consider reasonable, and we do not promise that they will be achieved.

Actual results may differ materially from these forecasts due to various factors in the future, including changes in economic conditions, changes in customer needs and user preferences, competition with other companies, and changes in laws and regulations.
