- English version: <https://www.dic-global.com/en/csr/sustainability-report/>

To further strengthen dialogue with stakeholders, including shareholders and investors, the DIC Group has revised its disclosure framework beginning in fiscal year 2026. This involved reorganizing the former Integrated Report into two separate publications—the DIC Report and the Sustainability Report—each with a clearly defined role.

The Sustainability Report 2026 presents comprehensive information on the DIC Group's approach to sustainability, its governance framework, approach to double materiality assessment, and detailed environmental, social and governance (ESG) information. The report provides clear, comprehensive information, including supporting data, on initiatives that underpin the Group's sustainable growth in key areas such as climate change, resource recycling, safety, product quality, human rights, human resources, and governance.

Looking ahead, the DIC Group will continue to prioritize constructive dialogue with stakeholders and contribute to the long-term enhancement of corporate value and the realization of a sustainable society through transparent information disclosure.
