**CAC Holdings Corporation to Introduce AI Assistant “Claude” Developed by Anthropic Across All Group Companies in Japan and Overseas
— Accelerating Transformation into an AI-Native Corporate Group —**

CAC Holdings Corporation (head office: Chuo-ku, Tokyo; President and CEO: Ryota Nishimori; hereinafter, the “Company”) hereby announces that it will introduce “Claude,” an AI assistant developed and provided by Anthropic PBC of the United States (“Anthropic”), across all Group companies in Japan and overseas.

This initiative is part of the CAC Group’s AI Transformation investment totaling JPY 2.0 billion over the five-year period from FY2026 to FY2030. The CAC Group positions generative AI as a foundational technology that supports the transformation of corporate activities, and will promote the use of AI across all areas of business, including system development, system operations, sales and marketing, and corporate operations. Through these efforts, the Group will accelerate its transformation into an “AI-native company.”

■Background

With the rapid evolution and spread of AI technologies, including generative AI, the IT business is entering a major turning point. The Company views this turning point as an opportunity to accelerate its evolution from a conventional system integrator (SIer), and is promoting AI Transformation.

The introduction and rollout of Anthropic’s advanced AI assistant “Claude” is expected to support the CAC Group’s AI Transformation. Through this initiative, the Company will promote its transformation into a corporate group that creates new value together with AI and connects the results to the resolution of social issues.

■Overview of This Initiative

・Use of “Claude” by CAC Group companies

The CAC Group will promote the use of “Claude” across all Group companies in Japan and overseas in its businesses, including system integration, system operations, and BPO (Business Process Outsourcing) services, which the Group has developed over many years. Through this initiative, the Group aims to improve operational efficiency and enhance service quality.

・Accumulation of knowledge through internal use

By thoroughly using “Claude” within the CAC Group, the Group will verify the advancement of operations and productivity improvement in each business area. The practical knowledge accumulated through these in-house initiatives will be returned to customers’ businesses and industries, as well as to society, in the form of new value creation.

・Linkage with products and services of Group companies

The CAC Group will combine “Claude” with the products and services of Group companies, including its independently developed AI agent “AZAREA Agent+,” to meet the diverse needs of customers and society in solving various issues. Some Group companies have already been developing services using “Claude,” and the Group will further accelerate these efforts through the introduction and rollout of “Claude” across all Group companies.

·Development of next-generation BPO services using “Claude”

The CAC Group will work to develop next-generation BPO services using “Claude.”

In these services, while undertaking operations entrusted by customers, the Group will concurrently build and train AI agents, transferring accumulated knowledge and decision-making processes to AI. Ultimately, the Group aims to transfer AI agents to customers and realize a state in which customers themselves can use AI to perform and improve their operations.

■Comment from Takahiro Suzuki, Executive Officer and CTO (Chief Technology Officer), CAC Holdings Corporation

The CAC Group is promoting AI Transformation across all operations, centered on providing value to customers. In system integration services, we are already working to convert products such as “AZAREA Agent+” into AI-enabled agents, that is, to make them capable of autonomous execution. In this agentification process, Claude, the AI model developed by Anthropic, is an essential element at this stage, and I firmly believe that the further application of Claude is the most effective means of achieving autonomous execution at an early stage. By realizing AI Transformation centered on the application of Claude not only to system integration and agentification of products, but also to all Group businesses, including operation services, the CAC Group will strongly promote its transformation from a system integrator into an AI agent integrator.

■About CAC Holdings

CAC Holdings Corporation is the holding company of the CAC Group, which was founded in 1966 as Japan’s first independent software specialist company and has been providing IT services globally for 60 years. Under its group vision, “CAC Vision 2030: Becoming a corporate group that continues to make a positive impact on society through technology and ideas,” the Group aims to create new value for society by focusing on the creation of new products and services that leverage its strength in AI technologies.
