## **Notice concerning declaration of achieving carbon neutral by 2050**

~Renewable energy usage percentage to be 100% by 2030,  
20 years ahead of the target year of RE100.~

ENVIPRO HOLDINGS Inc. declares that the greenhouse gases emitted from all of our businesses of our Group to be carbon neutral by 2050.

Following the entry into force of the Paris Agreement in 2016 and the subsequent progress of global decarbonization, we have set an aim of being net zero greenhouse gases emitted from all our businesses by 2050, including the disposal and recycling of scrap and waste materials handled by our Group.

### **Resource issue and Climate change issue**

Resource issue and climate change issue are closely related to each other, not individual issues, and furthermore both of issues are global social issues. Endless resource mining and greenhouse gas emissions are detrimental to sustainability. And we should find any solution to preserve the planet Earth's resources and its natural environment that we share in the future.

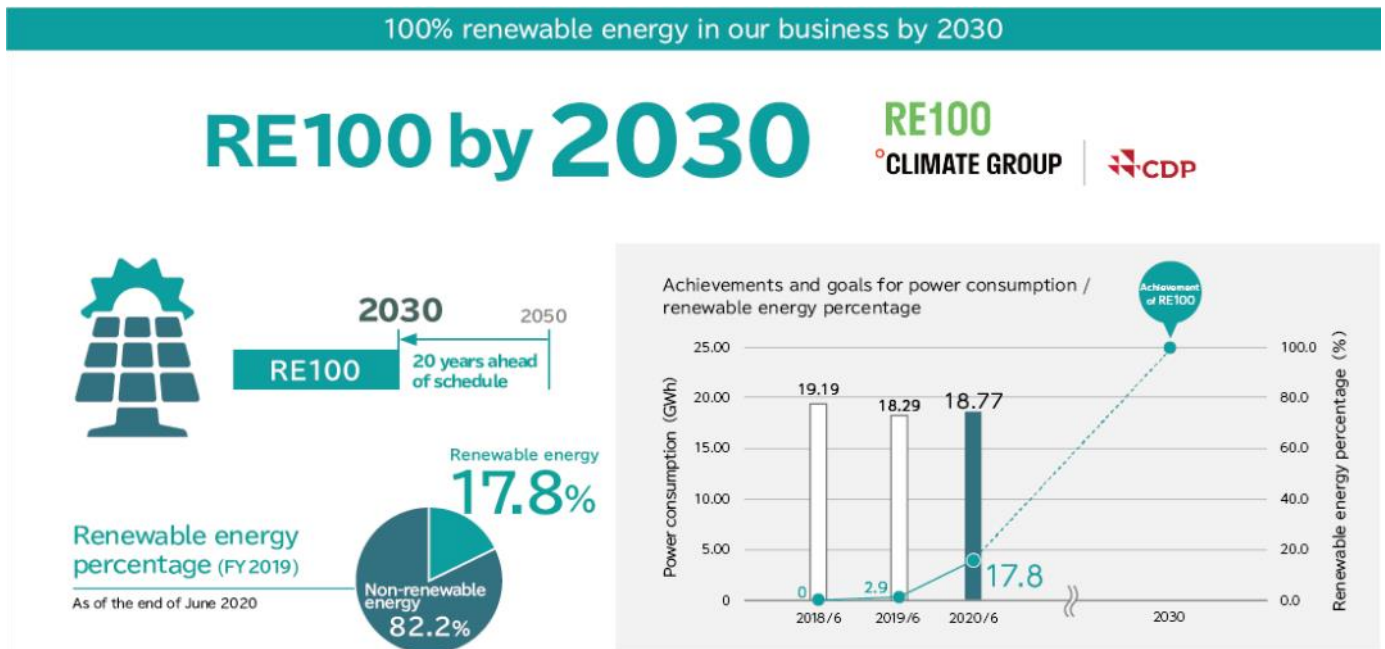

Our Group's business, which is located at the end of the supply chain and responsible for Resource Circulation Business, has the characteristics that enable it to tackle both of these critical social issues through its business process, and we believe that this is precisely the social responsibility that we should fulfill.

## ■ 100% renewable energy in our business by 2030

In July 2018, we joined "RE100", which aims to source 100% renewable energy in our business by 2050. Currently, renewable energy sources in our group accounts for 17.8%.

This time as we announced our commitment to be carbon neutral, we reset our target year of RE100 to 2030 which is 20 years ahead of schedule.

This is because we recognize that expanding and accelerating renewable energy which is the most important measure against climate change is an important theme to tackle for our company, which has the mission of "contribute to create a sustainable society".

Aiming to achieve the goal, our Group is promoting the introduction of renewable energy at each plant and office. Renewable energy in our Group accounted for 17.8% of energy consumption in FY 2019, a significant increase from 2.9% in FY 2018.

We will promote efficiency and decarbonization of energy use to achieve the greenhouse gas reduction, and at the same time, we will realize decarbonization and circular economy through our business by advancing information disclosure and engagement.

## ■ Future outlook

The impact of this matter on the business results for the fiscal year ending June 30, 2021 will be minor.

We will promptly notify you if any impact on our business performance in the future.
