Notice Concerning Introduction of New Equipment

PRESS KOGYO CO., LTD. (the “Company”) hereby announces that the Company has established a new integrated production line at its Utsunomiya Plant for side members, which are structural components of frames for heavy and medium duty trucks as part of its efforts for “Expanding and challenging strategies in core business,” one of the main themes of the medium-term business plan **PRESEnCE28** (FY2024 to FY2028). The details are as follows.

1. Features of the Newly Installed Equipment

The newly established integrated production line enables flexible selection between a press forming machine and a newly installed roll forming machine incorporating the Company’s proprietary technologies, depending on the specifications and production volume of the side members. This flexibility enhances the Company’s ability to respond to customer needs while improving its competitiveness in high-mix, low-volume production.

In addition, the introduction of new shot blasting equipment has further enhanced product quality and appeal.

2. Start of production

Mass production commenced in phases from October 2025 through August 2026.

3. Production site

Japan(Utsunomiya Plant)
