Notice Concerning the Suspension of Power Generation at Asset Under Management

Canadian Solar Infrastructure Fund, Inc. (hereinafter referred to as “CSIF”) announces that Canadian Solar O&M Japan K.K. (“CSO&M”), to which CSIF outsources O&M services, has reported a power generation outage occurred at the CS Fukuyama-shi Power Plant owned by CSIF due to a PCS failure on April 10, 2026. The details are as set forth below.

According to the report by CSO&M, power generation at the CS Fukuyama-shi Power Plant came to a complete halt in the evening of April 10 due to a PCS failure, and the plant has remained unable to generate power since then.

We plan to promptly carry out necessary restoration works, including identifying the cause, and to resume power generation. We will announce the cause of this incident, details of the restoration works, and an estimated amount of the final damages as soon as they are determined.

Since the CS Fukuyama-shi Power Plant accounts for 1.34% (3.31 MW) of the total panel output (247.57 MW) of CSIF’s 35 power plants, and also CS Fukuyama-shi Power Plant is entitled to receive a basic rent (equivalent to 70% of the monthly rent forecast) from the lessee, the impact of the suspension of power generation on the rent income of CSIF as a whole is expected to be limited and there will be no revision to the forecasts for the fiscal period ending June 2026 (18th period) and the fiscal period ending December 2026 (19th period).

End
