Notice Concerning the Suspension of Power Generation
at Asset Under Management (Follow-up Report)

On April 13, 2026, Canadian Solar Infrastructure Fund, Inc. (hereinafter referred to as “CSIF”) reported a power generation outage occurred at the CS Fukuyama-shi Power Plant owned by CSIF due to a PCS failure. Today, CSIF would like to report that the restoration work at the plant has been completed and resumed full operation as follows:

1. Following the suspension of power generation, emergency measures were implemented and efforts toward permanent restoration had been continued. Today, all necessary work for permanent restoration, including preventive replacement of components, has now been completed, and the CS Fukuyama-shi Power Plant has returned to its normal operation.
2. The cost of the restoration work was approximately JPY 800 thousand. Since the CS Fukuyama-shi Power Plant accounts for 1.34% (3.31 MW) of the total panel output (247.57 MW) of CSIF’s 35 power plants, and also CS Fukuyama-shi Power Plant is entitled to receive a basic rent (equivalent to 70% of the monthly rent forecast) from the lessee, the impact of the suspension of power generation on the rent income of CSIF as a whole is expected to be limited and there will be no revision to the forecasts for the fiscal period ending June 2026 (18th period) and the fiscal period ending December 2026 (19th period).

End
