Notice of Resumption of Operation of Omaezakikou Biomass Power Plant

RENOVA, Inc. ("RENOVA") announces that Omaezakikou Biomass Power Plant, which is owned by its consolidated subsidiary, Omaezakikou Biomass Power Plant G.K., resumed operation on October 10, upon completion of the inspection and repair work that had been conducted since June 2025, with the restart of operation timing having been rescheduled to October as announced on September 22, 2025.

Under the initial plan for the current fiscal year (ending March 31, 2026), scheduled maintenance of approximately 20 days was planned in January 2026. Since the major inspection and preventative maintenance works to be conducted during the scheduled maintenance have been completed as part of the recent repair work, the planned January 2026 maintenance has become unnecessary. Accordingly, RENOVA plans to conduct only a follow-up inspection of the repaired areas in January 2026.

Although the suspension of operation causes a decrease in revenue, the overall impact on the financial results for the current fiscal year (ending March 31, 2026) is expected to be minor. This is primarily due to the several factors that include the completion of the aforementioned scheduled maintenance at Omaezakikou Biomass Power Plant, a certain level of buffer for unscheduled suspension that was already included in the full-year forecast for the biomass power generation business, an increase in profit from lower spot fuel prices, and the recording of additional business development fees from storage battery businesses which were not included in the initial forecast.

RENOVA will promptly disclose any other matters that should be announced as and when they arise.
